

Job opportunities by Department of Medicine, National Defense Medical Center, Taipei

We are keen to find competent people to join us in production of human antibodies and antigens, using both human hybridoma and phage display platforms, to develop human antibody-based diagnostic reagents and disease-specific therapies for a wide of autoimmune diseases, especially systemic lupus erythematosus and IgA nephropathy.

We warmly welcome applicants who have owned a doctoral, master or bachelor degree in medicine, immunology, nutrition, biology, agriculture or any other related fields, to become our valued team members.
